

CS220 Applied Machine Learning
Course Syllabus, Semester 1 2025 (2025-S1)

Course Learning Outcome

CLO4: Analyse and apply core machine learning methods, including supervised learning, model evaluation, and regularisation.

Topics

1. Supervised learning: regression and classification
2. Model evaluation: cross-validation, bias and variance
3. Regularisation and feature engineering
4. Tree ensembles and gradient boosting
5. Neural networks: an introduction

Prerequisite: MA201 Linear Algebra

Assessment: coursework 40 percent, final examination 60 percent

Course coordinator: Dr Sobri (verified on the faculty course page)
